Homework #2
Due: <u>May 16, 11:59 PM</u>

The researchers at International Bio-robot Factory have invented a new kind of Bio-robot, a robot with behavior mimicking biological organisms. The development of the new robot is at a primitive stage; they now resemble simple four-wheeled rovers. And like most modern robots, Bio-robots are not very mobile. Their weak motors and limited turning capability put considerable limitations on their movement, even in simple, relatively obstacle-free environments. Currently the Bio-robots operate in a room which can be described as an $m \times n$ grid. A Bio-robot occupies a full square on this grid. The exit is in the northeast corner, and the room slopes down towards it, which means the Bio-robots are only capable of moving north or east at any time. Some squares in the room are also occupied by walls, which completely block the robot. Figure 1, which corresponds to the sample input, shows an example of such a room.

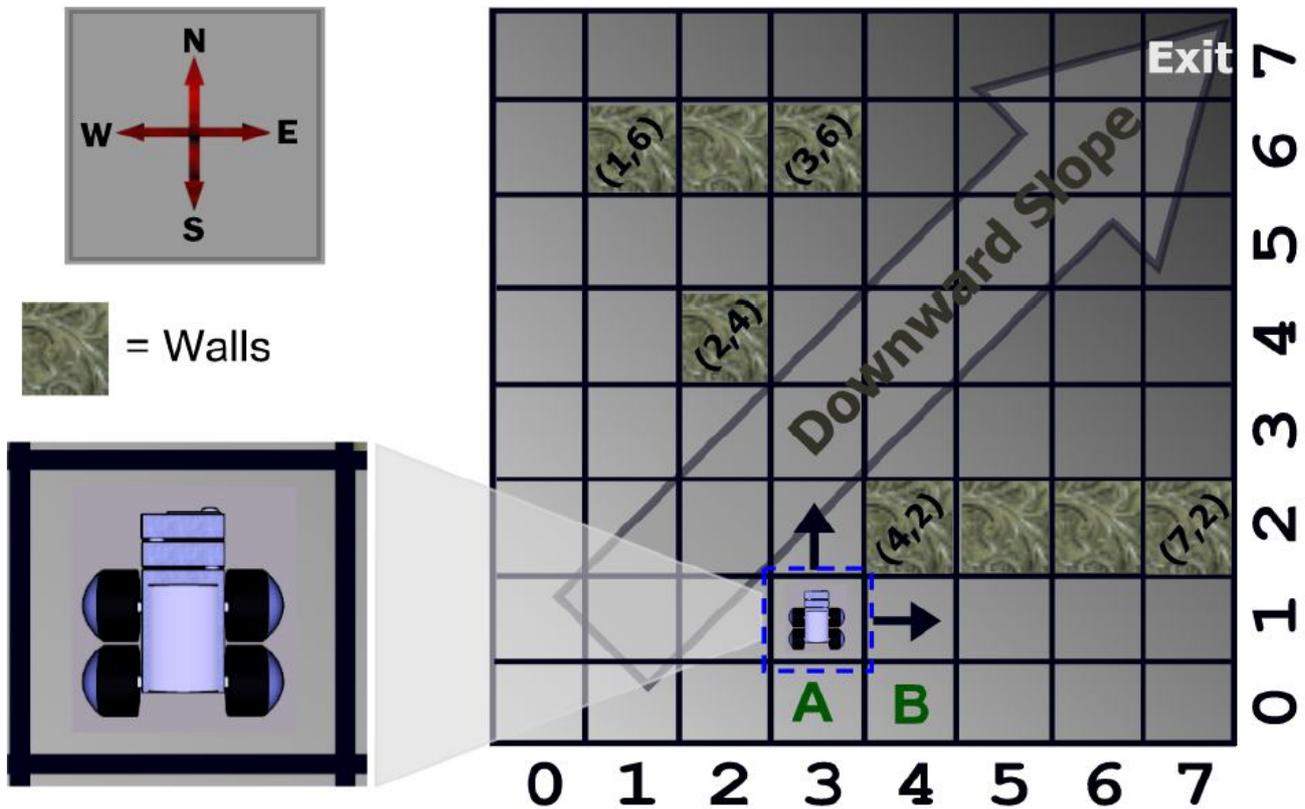

Figure 1

Clearly, a Bio-robot located on square A is capable of leaving the room, while one at square B is trapped inside it, no matter what it does. Locations like B are called "stuck squares." (Walls do not count as stuck squares.) Given the description of a room, your job is to count the total number of stuck squares in the room.

Input

The input begins with a line containing three integers m, n, and w ($1 \leq m$, $n \leq 100$, $0 \leq w \leq 100$). These indicate that the room contains m rows, n columns, and w horizontal walls. Each of the next w lines contains four integers x_1, y_1, x_2, y_2, the coordinates of the squares delimiting one wall. All walls are aligned from west to east, so $0 \leq x_1 \leq x_2 < n$ and $0 \leq y_1 = y_2 < m$. Walls do not overlap each other. The southwest corner of the room has coordinates $(0, 0)$ and the northeast corner has coordinates $(n-1, m-1)$.

Output

Display one line of the number of stuck squares in the given room. Follow the format shown in the sample output.

Sample Input

8 8 3
1 6 3 6
2 4 2 4
4 2 7 2

Sample Output

8
