Specifications

Test 1: `getnice()` of `init`

Test 2: `getnice()` of non-exist processes

Test 3: `setnice()`

Test 4: `setnice()` to non-exist processes

Test 5: `setnice()` with wrong nice value

Test 6: `getnice()` of `fork()`

ps: 10 points for printing out `ps()`, 10 points for measuring runtime of processes

- **Team 4 & 12** only updates runtime when event occurs (ex. `yield()`, `fork()`, `sleep()`), so getting runtime during process which is running was incorrect. Also, for the testcase, if `ps()` was called before `yield()`, `ps()` couldn’t get proper runtime value.

yield: `yield()` system call runs correctly
